API DevOps Engineer - Plymouth, MN, Raleigh NC, Hartford, CT

📁 API DevOps Engineer - Plymouth, MN, Raleigh NC, Hartford, CT - 707739

Position Description

Transform health care and change the way consumers engage with technology.

Sounds like a big challenge, right? Here, at Optum, you have the opportunity to achieve great things while you showcase your passion and technical expertise as an **API Security Gateway Administrator.** You'll be inspired by working alongside some of the most brilliant minds in technology who bring compassion, energy and focus to their work every day on a mission to change health care as we know it. Join us! Come share who you are and start doing **your life's best work.(sm)**

As part of our development team, you will predominantly be involved in building business solutions by creating new and modifying existing software applications. You'll stretch your skills and grow your careers as a primary contributor in designing, coding, testing, debugging, documenting and supporting all types of applications consistent with the established specifications and business requirements in order to deliver business value.

Primary Responsibilities:
- Demonstrate understanding of cross-functional/cross-domain requirements and impact
- Maintain knowledge of current and emerging technologies/products/trends related to architectural solutions.
- Ensure alignment of solutions with business and IT goals/objectives
- Ensure alignment with enterprise technology standards (e.g. solution patterns, application frameworks, technology roadmaps, capital plans)
- Work with API development community to continually improve API management platform
- Implement API security policies using Layer7 or Datapower
- Look for opportunities and implement automation/process improvements
- Evaluate and provide recommendation for new tools which enhances API management platform
- Troubleshoot and solve urgent issues relating to business critical APIs
- Provide 24X7 on call support periodically
- Work with business owners, analysts, solution engineers, development teams and infrastructure services to communicate application and data architectures
- Ensure project successfully implements the designed solution following architectural tenets
- Help assess the planning for retirement of products and migration plans for the functional evolution of the system infrastructure
- Review the work of others

Requirements

To be considered for this position, applicants need to meet the qualifications listed in this posting.
Required Qualifications:
- Undergraduate degree or equivalent experience
- 7+ years of professional IT experience
- 4+ year experience in Java development or equivalent middleware administration experience
- Willingness to learn API Security gateway administration
- 2+experience working with at least 2 of the following: XML, XML Schemas, XSLT, XPath, SOAP, REST, JSON, WADL and WSDL
- 1+ years of provisioning and administering Unix VMs, Shell scripting

APPLY   SAVE

Preferred Qualifications:

- Agile development experience
- 3+ years 'hands on' experience developing security policies with CA Layer7 or Datapower
- 2+ years of experience providing API Security Architecture
- Solid experience and understanding of API Security patterns using OAuth 2.0 and other modern patterns
- Prior experience working with Government organizations for API based integrations.
- Health care industry experience
- Experience working in DevOps environment

Technology Careers with Optum. Information and technology have amazing power to transform the health care industry and improve people's lives. This is where it's happening.
